

Vipin Neekamparambath

Agentic AI, GenAI & Engineering Digitization

Munich, Germany | nvipin63@gmail.com | +49 160 96815049 | www.linkedin.com/in/vipin-n

Professional Summary

Agentic AI Engineer with 10+ years of engineering and digital transformation experience, now focused on designing and delivering AI-powered enterprise solutions. Skilled in multi-agent orchestration, LangChain, LangGraph, Deepagents, RAG, MCP-enabled tool integration, and AI copilots that connect complex business and engineering workflows. Combines strong engineering domain understanding with Python development, agile delivery, stakeholder management, and practical agent architecture.

Employment History

Accenture DACH, Munich
Sr. Analyst

08/2023 - Present

- Lead Agentic AI and GenAI engineering initiatives for PLM and engineering digitization, translating engineering needs into deployable LLM and agent workflows.
- Architect an Engineering Orchestrator multi-agent platform connecting requirements, PLM, design, simulation, and downstream engineering lifecycle activities through coordinated agents, tools, and knowledge retrieval.
- Serve as dev lead for end-to-end FMEA analysis agents, shaping workflow decomposition, agent responsibilities, prompt, tool design, and validation approaches.
- Lead delivery of agents for requirements engineering and requirements management using deepagents framework
- Develop LLM-based knowledge management and retrieval capabilities that improve access to critical engineering data, reusable knowledge, and process guidance.
- Partner with product owners, domain experts, and delivery teams to align agent behavior with engineering processes, governance expectations, and adoption needs.

Altair Engineering, Bengaluru
Technical Specialist

01/2022 - 07/2023

- Owned project planning, client engagement, requirement gathering, and delivery coordination for engineering automation initiatives.
- Designed, developed, tested, and deployed automation tools for Altair applications, covering pre-processing, post-processing, and report generation.
- Delivered end-to-end CAE automation solutions that reduced repetitive engineering effort and improved workflow consistency.

- Managed a centralized Azure Repos script repository to organize and maintain macro collections across multiple divisions.
- Built a Microsoft PowerApps script-library application that enabled cross-functional teams to search, access, and manage reusable engineering scripts.

Valeo, Chennai
Automation Engineer

01/2018 - 06/2021

- Founded and served as single point of contact for the CAE automation team at Valeo Chennai.
- Established team standards including work instructions, GUI templates, script templates, checklists, and automation dashboards.
- Built dashboards to track automation progress, specifications, and time savings across engineering automation work-streams.

Tata Consultancy Services, Bengaluru
Systems Engineer

11/2014 - 12/2017

- Created HyperWorks scripts to improve FE modeling efficiency and reinforce CAE quality standards.
- Supported CAE vehicle safety work including FE modeling and vehicle subsystem assembly in HyperMesh.
- Contributed to locomotive design activities by interpreting drawing markups and implementing engineering revisions in UG NX.

Education

National Institute of Technology Calicut

Master of Technology | Industrial Engineering & Management | 2012 - 2014

Publication: Optimization of assembly job-shop scheduling using priority dispatching rules

CGPA: 7.4

Skills

Professional Skills: Project Management | Cross-functional Collaboration | Technical Leadership | Training Delivery

Technical Skills: Agentic AI | Langchain | Langgraph | Deepagents | LLMs | RAG | Python | Tcl/Tk | Google Apps Script | Azure AI Foundry | GCP

Soft Skills: Analytical Thinking | Attention to Detail | Problem Solving | Leadership | Time Management

Projects

Engineering Orchestrator | *Agentic AI, Langchain, Azure, RAG, MCP*

- Multi-agent engineering platform that coordinates agents across requirements, PLM, design, simulation, and lifecycle workflows.
- Designed to connect engineering tools, enterprise knowledge, and process logic into a cohesive AI-assisted operating layer for engineers.

FMEA Analysis Agents | *Langgraph, LLM orchestration*

- Dev lead for end-to-end FMEA agents supporting workflow decomposition, context retrieval, analysis guidance, and structured engineering outputs.

Requirements Engineering Agents | *Deepagents*

- Leading team delivery of agents that assist requirements elicitation, analysis, interpretation, traceability-oriented workflows

Non-Conformity Agents | *GenAI, RAG*

- Built agents for non-conformity workflows to help engineers navigate quality context, supporting evidence, and process-driven next actions.

FEM Copilot | *GenAI, FEM, simulation automation*

- AI-powered assistant for FEM workflows, providing context-aware suggestions for model creation, boundary conditions, material selection, and analysis steps.

Chassis Automation Tool | *HyperMesh, Tcl/Tk*

- Interactive and batch pre-processing automation tool guiding CAD organization, mesh creation, seam weld creation, and quality checks for a leading automobile manufacturer.
